Session abstract

Title: Conflict Resolution in Water Resources and Environmental Management

Session Organizers: Keith W. Hipel (University of Waterloo, Canada; kwhipel@uwaterloo.ca), Liping Fang (Ryerson University, Canada; lfang@ryerson.ca) and Michele Bristow (University of Waterloo, Canada; mtheng@uwaterloo.ca)

Special sessions on conflict resolution are being organized in order to provide a forum for presenting, discussing and disseminating research pertaining to the development and application of game theoretic methods to challenging water resources and environmental problems. Topics involve the investigation of disputes arising over water quantity and quality issues such as sedimentation caused by land-use changes, fair allocation of scarce water resources, utilization of water in energy production, impacts of climate change, exportation of water in bulk quantities, widespread water pollution, and compliance to environmental regulations. Authors wishing to participate in these sessions should indicate this when they submit their abstracts online to www.water-environment.org by the deadline of December 16th, 2012.
